

Corporate Website Template System

Adopted by 80% of corporate and recruitment clients

Role: Web Designer / UI Designer

Tools: Figma, HTML, CSS, JavaScript

Year: 2024 – Present

Overview

Designed a scalable corporate website template that became the company's standard solution for corporate clients. Its structured layout and professional presentation led to widespread adoption across projects, particularly in recruitment and business service industries.

Problem

Corporate clients needed websites that could effectively communicate their services and establish trust with potential customers. However, existing designs presented several challenges:

- Lack of clear structure and content hierarchy
 - Inconsistent layouts across different projects
 - Difficulty in presenting business information clearly
 - Limited scalability for reuse across multiple clients
-

Goal

Create a reusable and scalable website template that:

- Improves clarity and readability of content
 - Supports different types of corporate businesses
 - Maintains a consistent and professional visual identity
 - Reduces design time for future client projects
-

Solution

Designed a structured and reusable layout system that simplifies how corporate content is presented. The template prioritizes clear sectioning, strong visual hierarchy, and guided user flow, making it easier for users to understand services and take action.

Design Approach

The design was guided by principles of clarity, consistency, and scalability.

Key Design Decisions

- Implemented a section-based layout for better content organization
- Used a large hero section to create a strong first impression
- Designed card-based components for services and news sections
- Applied consistent spacing and alignment for visual balance
- Positioned clear call-to-action elements to improve user flow

Why This Design Was Effective

- Clear structure made content easy to scan and understand
 - Professional visual style aligned with corporate expectations
 - Modular sections allowed quick adaptation for different clients
 - Consistent layout reduced decision-making for clients
-

Layout Structure

The template uses a modular section-based system:

- Hero (brand introduction)
- Company Overview
- Services / Business
- News
- Location / Access
- Contact

Each section is designed for reuse, allowing consistent structure across different client websites.

Process

Wireframing

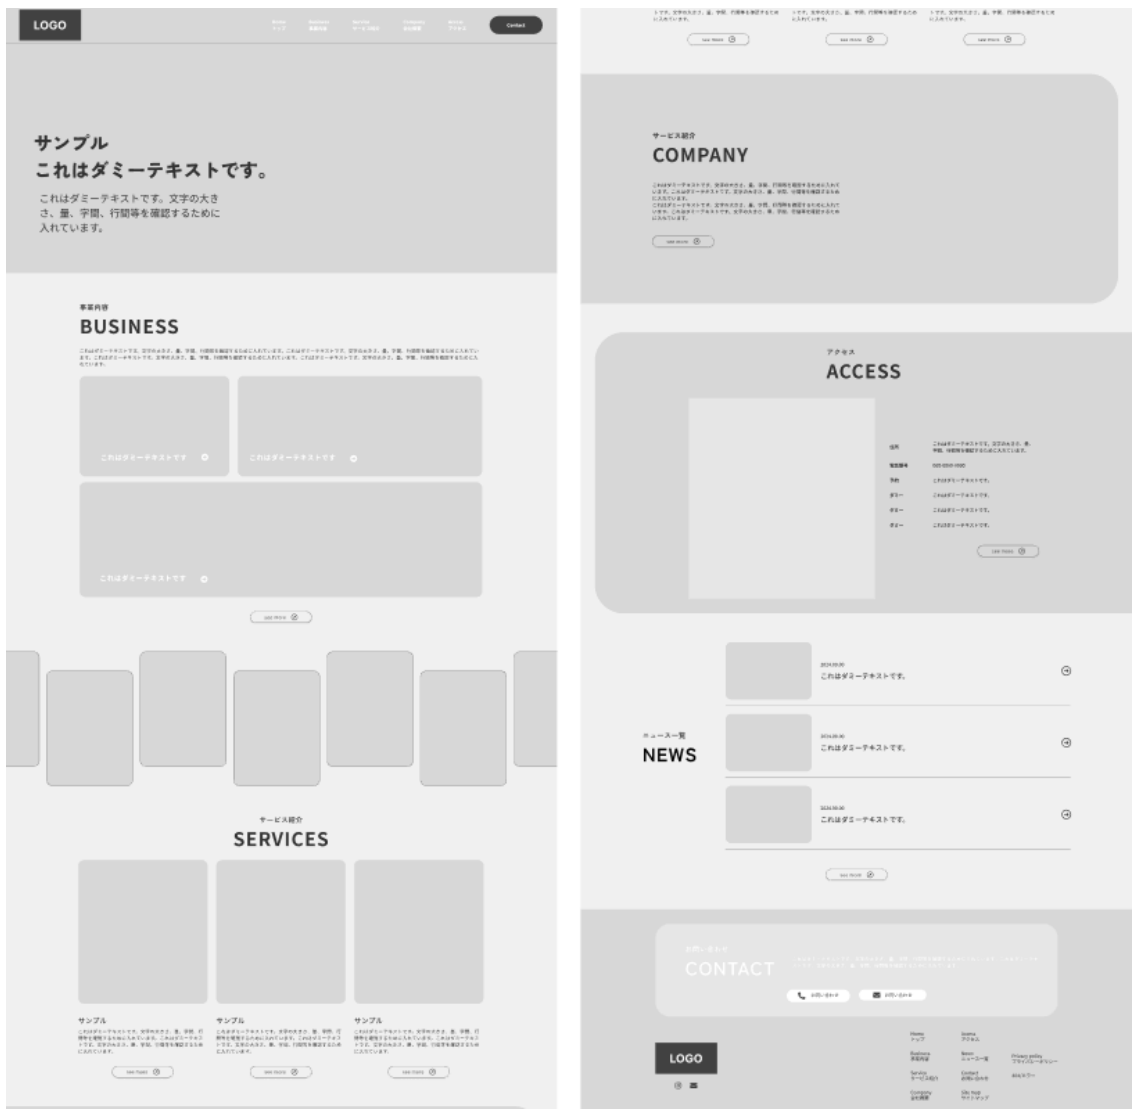

Defined the overall layout structure and content hierarchy to ensure clarity and logical flow.

UI Design

Created the interface in Figma using consistent typography, spacing, and visual hierarchy.

Development

Translated the design into responsive web pages using HTML, CSS, and JavaScript.

Final Design

Desktop View

- Homepage layout designed for clear corporate presentation
- Service section using reusable card components
- Contact section with strong call-to-action

Mobile View

Impact

- Adopted by approximately **80% of corporate and recruitment clients**
 - Established as a **standard template across multiple projects**
 - Reduced design time through reusable structure
 - Improved consistency and quality of delivered websites
-

Key Outcome

This template evolved into a core design system within the company, widely used for corporate websites due to its structured layout, professional appearance, and scalability.
